

Circus Tent Set Up Instructions

Tip: Place frames on the floor in order they need to be assembled

1) Place frames on floor in correct order to be assembled. The order is marked on the outside of the frames

2) One person lifts the first frame into place

3) A second person lifts the next frame into place while a third person places the bolts through the 3 holes on each side of the frames and then adds nuts without completely tightening

4) Once all the frames are in place use a ladder to add the final triangle panel. You might need two people to push the structure closer together to close the gap. Once the triangle panel is in place tighten all nuts and bolts

5) Adding the fabric. Start by placing the logo panel on the back frame and work the tent cover around to the front attaching it to the velow as you go. To add the top panel place a ladder inside the tent and pass the top to the person on the ladder to set in place

6) Lastly if outside use the guy lines and pegs to secure the tent to the ground. If inside the guy lines can be used to secure the top by tying them to the bottom of the frame.

2x 12.5kg weights are provided for extra stability
